# PROJECT WAREHOUSE MANAGEMENT – Group 6

Story-

The Story is about the description and basic flow of warehouse management application.

Story Board

WAREHOUSE MANAGEMENT SYSTEM

Story Starts

Insert the data for stockist id and supplier id registration like name ,contact no.& password.

Eg:Radha;9874256797;xyz

Place order, select three items from the product file.

Eg xyz

Check for the stock,ROL:

If ROL<Q, then restock the product and product order will be cancelled.

If ROL >=Q, the order is placed and delivered.

If ROL<Q, then a request would be sent to the supplier for restock and status indicator will turn into yes.

Admin would generate and update reports for all the stockist who ordered regularly, products which are regular in demand and the products ordered by the stockist.
